

CYBERSECURITY & OPERATIONAL RESILIENCE

cayusecommercialservices.com

PROTECTION AGAINST AND RECOVERY FROM THREATS AND DISRUPTIONS

The objective of Cybersecurity and Operational Resilience is to prevent, respond to, and recover from business interruptions, such as adverse system compromises, internet attacks, and disruptive events. Traditional measures, such as penetration testing and security assessments lack the necessary means to stop the challenges posed by sophisticated attackers.

Cayuse's Cybersecurity and Operational Resilience program implements modifications that provide the ability to adapt to potential security threats, account for financial impacts, and safeguard valuable assets to protect business reputations. Cayuse identifies gaps to mitigate the attack surface while enlisting best practice remediation solutions to improve and secure continuity of operations.

HOW WE CAN HELP

- Proven solutions and methodologies for protection against cyber risks that impact business operations
- Tenured cybersecurity experts who can provide lessons learned from multiple clients
- Enlistment of cyber resilient strategies during business disrupting events
- Data integrity services for hybrid, and on-premises cloud solutions
- Data Anomaly Detection
- Continual policy updates using benchmarks and Security Technical Implementation Guides (STIGs)
- Effective ransomware protection policies

WE DELIVER

- Solid initiatives for consistent monitoring, recovery, and risk management
- Current industry level security policies and procedures
- Managed Security Services
- Security Governance and Risk Management
- Cyber and Operations Resilience best practices for system and data protection and recovery
- CISSP, CCNA, CSAP+, CBCP and Certified Ethical Hacker credentials

Cayuse is a 100% Native American-owned company. As a certified diversity provider, Cayuse offers companies the opportunity to support Native Americans and Native Hawaiians while receiving world-class services at a competitive price.
